The Child Appeal Scoring System (CASS) is a structured framework designed to assess the extent to which a product is likely to attract and engage children. In an environment where children are frequently exposed to a wide range of consumer products. It is increasingly important to evaluate not only the safety and compliance of these products but also their degree of child-directed appeal. Using the following score system, evaluate the product design for further risk analysis.

1(Low Appeal) – unlikely to engage children, mainly adult-focused.
2(Moderate Appeal) – contains some features that may attract children, but not intentionally child-directed.
3(High Appeal) – intentionally designed to be attractive to children.
4 (Very High Appeal) – strongly child-focused, with multiple overlapping features.

This scoring provides a clear benchmark for comparisons between products and across industries.
